

Medication Reconciliation Post-Discharge (MRP)

Description: A type of review in which the discharge medications are reconciled with the most recent medication list in the outpatient medical record. It aims to capture the percentage of discharges for member 18 years and older for whom medications were reconciled the date of discharge through 30 days after discharge (for a total of 31 days). The reconciliation may be conducted by a prescribing practitioner, clinical pharmacist or registered nurse.

*Members in hospice are excluded from the eligible population

Documentation: Documentation in the outpatient medical record must include *evidence of medication reconciliation and the date when it was performed.*

Any of the following meets criteria:

- Documentation of the current medications with a notation that the provider reconciled the current and discharge medications
- Documentation of the current medications with a notation that references the discharge medications (e.g., no changes in medications since discharge, same medications at discharge, discontinue all discharge medications)
- Documentation of the member’s current medications with a notation that the discharge medications were reviewed
- Documentation of a current medication list, a discharge medication list and notation that both lists were reviewed on the same date of service
- Documentation of the current medications with evidence that the member was seen for post-discharge hospital follow-up with evidence of medication reconciliation or review. Evidence that the member was seen for post-discharge follow-up requires documentation that indicates the provider was aware of the member’s hospitalization or discharge
- Documentation in the discharge summary that the discharge medications were reconciled with the most recent medication list in the outpatient medical record. There must be evidence that the discharge summary was filed in the outpatient chart on the date of discharge through 30 days after discharge (31 total days)
- Notation that no medications were prescribed or ordered upon discharge

Only documentation in the outpatient medical record meets the intent of the measure; however, an outpatient visit is not required.
